

Feeding Multiple Rooms with the same source.

Product required: Video Distribution Amplifier. Inday model HDDA-1

Problem: I have a DVD Player that needs to feed two rooms in my house. Both rooms have their own TV Monitors and Audio Receivers. I also want to record that signal into my Computer

Solution: Use a model HDDA-1 3-channel distribution amplifier. One channel is used to buffer and split the video signal. The other channel is used to split the COAX digital Audio (PCM,AC3,DTS).
